

SafeBreath™

A LOGICAL HYGIENIC CONCEPT FOR EXHALED CARBON MONOXIDE TESTING

Single patient use mouthpieces - Protecting your patients; Your device and the environment

Designed to achieve maximum hygiene results without the need for additional adaptors and the minimal use of plastics. SafeBreath™ mouthpieces are the ideal solution for all aspects of exhaled carbon monoxide measurements in smoking cessation, pre-operative assessment departments, and CO screening.

The filters have been independently tested and have a proven bacterial and viral efficacy >99% * ensuring optimal patient infection prevention and minimal cross contamination

SafeBreath™ filtered disposable mouthpieces are supplied in handy dispenser boxes containing 200 single use mouthpieces. SafeBreath™ mouthpieces have been designed to use the minimal amount of plastic whilst ensuring patient cross infection needs are addressed.

SafeBreath™ mouthpieces remove the need for using additional plastic adaptors or plastic mouthpieces reducing plastic waste and the environmental impact it has.

USER ADVANTAGES:

- Protects both patients and CO monitors
- Proven bacterial/viral efficacy > 99%
- Suitable for use with all MD Diagnostic CO monitors
- Reduces the need for additional plastic adaptors or mouthpieces traditionally used with CO monitors
- Supplied in convenient dispenser boxes.

Independently test by the Health protection Agency
Report No. 15/015
